PENTAIR ACADEMY TRAINING TOUR : 256 PERSONS TRAINED

As is the case every year, Pentair's training team took to the road in France, Belgium and Italy to meet the pool builders for the Pentair Academy Training Tour.

The programme of the **13 workshops** scheduled featured the discovery of the latest developments in terms of automation equipments, pumps and filtration, heating, lighting and laminars.

Presented by Arnaud Besson and Gregory Theunis, Pentair's technical managers, the various sessions focused particularly **on automation**, a topical issue that still raises many questions on the part of the pool builders.

Pentair Academy 2018-2019 in a few figures:

- 3** countries: France, Belgium, Italy
- 13** workshops
- 123** companies registered
- 256** persons trained

Sincerely,
Pentair Aquatic Systems
Marketing Europe Team

FEEDBACK FROM THE PROS

BENOÎT CANIVET - BCL Piscines (31)

Why participate?

It was to know more about the products and be equipped with all the information needed to sell them that Benoît participated in these training courses.

What did he like? The technical aspects:

"You can see that the staff doing the training know the products very well. The pedagogic contribution was interesting because we got to handle the pumps. I saw how the pumps and their accompanying automation system work. This was very important for me because there is a high demand among our consumers who are looking for a quality automation solution."

Conclusion?

He now feels more comfortable to talk about it.

DOMINIQUE LAPEZE - Pro Piscines 46

Why participate?

Dominique is a Pentair enthusiast for everything related to variable speed pumps and is very interested in innovation in the area of hydraulics. He has a high-end clientele and works exclusively with brands that innovate and offer quality products.

His credo? Energy gains.

To this end, he is working on flow rate, pressure and energy consumption. This is why he participates in these training courses every year: discovery of innovations, advice and interaction with the technicians, etc. - everything is an opportunity to "provide the best" for our consumers. For him, approximation is not an option. Everything must be calculated.

What would he like? To be able to open the equipments.

"I would like to be able to dismantle the pumps in order to understand them better and be able to repair them."

Conclusion?

"Valuable technical education to progress towards achieving quality."
